INTRODUCTION

We, Bridge Craft Engineers & Consultants are Engineering Design Consultants specializing in Structural Engineering, Geotechnical and Geo-Physical Engineering. We deliver technically sound, economically optimized, and execution-ready engineering solutions for government, institutional, commercial, and infrastructure projects.

Our strength lies in combining rigorous engineering analysis with practical field understanding. From soil investigation and foundation design to complete structural detailing and pavement engineering, we ensure that every project is built on a foundation of safety, precision, and compliance.

With experience of public sector tenders, banking infrastructure, institutional buildings, and infrastructure developments, we bring reliability, transparency, and technical integrity to every assignment.

We believe that great structures are not just constructed, they are engineered with responsibility.

OUR VISION

To be a trusted consultancy organization delivering reliable and sustainable engineering solutions for various Civil Engineering Projects including Road and Highway infrastructure.

VALUES

1. Engineering Integrity

We uphold accuracy, compliance, and ethical responsibility in every stage of design and execution.

2. Technical Excellence

We apply advanced engineering methods, updated codes, and rigorous validation to deliver optimized and safe solutions.

3. Reliability & Accountability

We ensure consistency in deliverables, transparent communication, and ownership of project outcomes.

4. Safety First Approach

We prioritize safety in design by incorporating risk assessment, code compliance, and field realities.

5. Practical Engineering

We combine analytical design with real-world site experience to deliver implementable solutions.

MISSION STATEMENT

To provide technically sound, field-verified, and cost-effective engineering services while adhering to applicable codes and specifications with consistency in quality and timelines.

CORPORATE STRATEGY

Bridge Craft Engineers & Consultants adopts a focused and sustainable growth strategy built on technical excellence, regulatory compliance, and long-term client relationships.

Our corporate strategy is guided by the following pillars:

01. TECHNICAL DEPTH & SPECIALIZATION

We strengthen our core competencies in:

- Structural Design Engineering
- Geotechnical Investigation & Analysis
- Foundation Engineering
- Pavement Engineering
- Detailed Project Reports (DPRs)

By continuously upgrading design tools, code compliance knowledge, and analytical capabilities, we ensure technically robust and future-ready engineering solutions.

2. GOVERNMENT & INSTITUTIONAL PROJECT FOCUS

We strategically position ourselves for:

- Public sector tenders
- Banking and institutional infrastructure
- Infrastructure development projects
- Soil investigation & survey assignments

We prioritize statutory compliance, documentation accuracy, and transparent project execution to build long-term credibility.

3. SUSTAINABLE & RESPONSIBLE ENGINEERING

We aim to deliver:

- Economically optimized structural solutions
- Resource-efficient designs
- Safe foundation systems based on precise soil analysis
- Long-lasting infrastructure performance

4. CONTROLLED & STABLE GROWTH

Rather than rapid expansion, our strategy focuses on:

- Strengthening technical reputation
- Expanding geographic reach gradually
- Building repeat client relationships
- Maintaining engineering integrity at every scale

TEAM

Bridge Craft Engineers & Consultants is led by experienced civil engineering professionals with expertise in structural design, geotechnical investigations, and infrastructure planning.

Our leadership combines analytical design proficiency with practical field exposure, ensuring technically sound and execution-oriented engineering solutions.

WHY CHOOSE US

Expertise in marine and
infrastructure projects

Integrated services: Structural,
Geotechnical & Geophysical

Execution-focused design
approach

Cost-effective and optimized
solutions

Capability in challenging site
conditions

Reliable project delivery

SERVICES

01

PRE-CONSTRUCTION & ENGINEERING ADVISORY

Strategic engineering support during planning and pre-execution stages to optimize design decisions, reduce risk, and improve project feasibility.

KEY CAPABILITIES

- Technical feasibility studies
- Pre-bid engineering support for EPC contractors
- Constructability review and risk assessment
- Value engineering and cost optimization
- Technical due diligence
- Independent design review and validation

02

STRUCTURAL ENGINEERING

Comprehensive structural design and analysis services for infrastructure and building projects, ensuring safety, durability, and constructability.

KEY CAPABILITIES

- Bridge design and structural assessment
- Highway and road structures
- Retaining walls and culverts
- Industrial and commercial building design
- Structural rehabilitation and strengthening
- Seismic analysis and retrofitting

03

GEOTECHNICAL ENGINEERING

Expert geotechnical investigations and foundation design solutions ensuring stability, safety, and long-term performance.

KEY CAPABILITIES

- Site investigation and soil testing
- Foundation design and optimization
- Slope stability analysis
- Ground improvement and stabilization
- Pavement subgrade evaluation
- Embankment and retaining structure design

04

GEOPHYSICAL ENGINEERING

Advanced subsurface exploration and testing using non-invasive geophysical methods to support engineering design and construction decisions.

KEY CAPABILITIES

- Seismic refraction and MASW surveys
- Electrical Resistivity Tomography (ERT)
- Ground Penetrating Radar (GPR) surveys
- Subsurface mapping and profiling
- Detection of cavities, utilities, and anomalies
- Integration of geophysical and geotechnical data

PROJECTS EXECUTED

01. MAJOR MARINE BRIDGE - NH-04

₹90L (FLAGSHIP PROJECT)

Title : Detailed Design Engineering-Major Bridge over Middle Strait Creek

Client : RKEC Projects Limited

Authority : NHIDCL

Location : South Andaman - Baratang Island, Andaman & Nicobar Islands

SCOPE OF SERVICES:

Full Detailed Design Engineering includes bridge foundation, substructure, superstructure, highway alignment, hydrological studies, geotechnical investigations, and authority coordination.

PROJECT DESCRIPTION:

EPC-based design consultancy for construction of balance works of a major marine bridge forming part of NH-04 connectivity in island terrain.

KEY HIGHLIGHTS:

- Marine Bridge Infrastructure
- 16 x 60m x 14.8m wide Bridge across Middle Strait Creek
- Total Length of the bridge is 1925m
- Superstructure in UHPC-M150 Grade
- 1500/1800mm Dia Piles upto 50m

- Hydrology & Hydraulic Studies
- Geometric Designs and Structural Designs
- Approvals
- Integrated Geo-Technical Investigations
- Long-Tem EPC engagement

PROJECTS EXECUTED

02. ADDITIONAL DEEP GEOTECHNICAL INVESTIGATION

₹40L (MIDDLE STRAIT CREEK)

Title : Additional Geotechnical Investigations – Major Bridge NH-04

Client : RKEC Projects Limited

Authority : NHIDCL

Location : Andaman & Nicobar Islands

SCOPE OF SERVICES:

Deep borehole investigations (30-50m), SPT testing, rock coring, lab testing, foundation evaluation.

PROJECT DESCRIPTION:

Advanced subsurface investigations across pier and abutment locations under challenging marine conditions.

KEY HIGHLIGHTS:

- 27 deep boreholes
- 30-50m depth exploration
- Marine & creek condition drilling
- SPT & rock core recovery
- Foundation design inputs

PROJECTS EXECUTED

03. NH-04 CORRIDOR UPGRADATION (26 KM)

₹70L

Title : Detailed Design Engineering - NH-04 Package IIIB
 Client : RKEC Projects Limited
 Authority : NHIDCL
 Location : Jarwa - Rangat Section, Andaman & Nicobar Islands

SCOPE OF SERVICES:

Highway alignment, pavement design, bridges & culverts, retaining structures, surveys, geotechnical investigations.

PROJECT DESCRIPTION:

Rehabilitation and upgradation of 26 km national highway stretch including bridge and structural components.

KEY HIGHLIGHTS:

- 26Km Highway Corridor
- Six Minor Bridges with spans 42m to 12m
- Traffic Studies and Pavement Designs
- Soil Survey
- Geo-Technical Investigations
- Hydrology & Hydraulic Studies
- Geometric Designs and Structural Designs
- Approvals
- Long-Term EPC engagement

PROJECTS EXECUTED

04. NH-45C VIKRAVANDI

SETHIYATHOPE (60 KM CORRIDOR)

Title : Geotechnical Investigation - NH-45C Four-Laning
 Client : Assystem India Ltd
 Authority : NHAI
 Location : Tamil Nadu

SCOPE OF SERVICES:

Subsurface investigations for bridge locations including boreholes, SPT testing, laboratory soil & rock analysis.

PROJECT DESCRIPTION:

Geotechnical support for 60.25 km national highway augmentation under NHDP Phase-IV.

KEY HIGHLIGHTS:

- 60 km highway corridor
- Bridge foundation investigations
- Rock coring & soil profiling
- IS-compliant lab testing

PROJECTS EXECUTED

05. THIRUVARUR BYPASS – NH-67 (14 KM)

Title : Geotechnical Investigation – 4-Laning DPR

Client : Assystem India Ltd

Authority : NHAI

Location : Tamil Nadu

SCOPE OF SERVICES:

Borehole investigations, SPT, CBR testing, laboratory soil analysis for pavement & bridge design.

PROJECT DESCRIPTION:

Subsurface investigations supporting DPR preparation for 14.16 km bypass corridor.

KEY HIGHLIGHTS:

- 14 km corridor
- Pavement subgrade evaluation
- Soil classification & CBR testing
- Detailed geotechnical reporting

PROJECTS EXECUTED

06. ROB 129A & ROB 134A - NH-67

Title : Geotechnical Investigation - Railway Over Bridges
 Client : Assystem India Ltd
 Authority : NHAI
 Location : Tamil Nadu

SCOPE OF SERVICES:

Confirmatory boreholes and foundation investigation for ROB structures.

PROJECT DESCRIPTION:

Geotechnical evaluation for railway overbridge structures under highway upgradation project.

KEY HIGHLIGHTS:

- Bridge-specific investigations
- Rock coring & SPT testing
- Foundation design inputs

PROJECTS EXECUTED

07. MANAIR RIVER RAILWAY BRIDGE

Title : Geotechnical Investigation – Manair River Railway Bridge
 Client : Assystem India Ltd
 Authority : South Central Railway
 Location : Telangana

SCOPE OF SERVICES:

Deep borehole investigations, soil & rock analysis, liquefaction assessment.

PROJECT DESCRIPTION:

Geotechnical support for major railway bridge along proposed new BG line corridor.

KEY HIGHLIGHTS:

- 30 boreholes
- 20m soil & 6m rock exploration
- Liquefaction studies
- Foundation capacity evaluation

PROJECTS EXECUTED

08. 350 MW SOLAR POWER PROJECT (PHASE 1 & 2)

Title : Geotechnical Investigation & ERT – 350 MW Solar Project (Phase 1) & Boreholes, Trial Pits & ERT – Solar Project (Phase 2)

Client : Chinta Green Energy Pvt Ltd

Authority : Private Utility-Scale Renewable Developer

Location : India

SCOPE OF SERVICES:

- Boreholes, trial pits, Electrical Resistivity Testing, soil classification & reporting.
- 22 boreholes, 12 trial pits, plant-wide resistivity surveys.

PROJECT DESCRIPTION:

- Subsurface investigations for foundation and earthing design of utility-scale solar power plant.
- Expanded geotechnical & geophysical investigations for large-scale solar facility.

ERT -7(Phase -2)

KEY HIGHLIGHTS:

Phase 1

- 350 MW capacity
- Boreholes & trial pits
- ERT surveys
- Integrated geotechnical reporting

Phase 2

- 22 boreholes
- 12 trial pits
- IS 3043 compliant ERT
- Foundation & earthing design inputs

PROJECTS EXECUTED

09. CPWD INSTITUTIONAL CAMPUS – GRI DINDIGUL

Title : Soil Investigation – GRI Campus Institutional Buildings
Client : Central Public Works Department (CPWD)
Authority : Government of India
Location : Dindigul, Tamil Nadu

SCOPE OF SERVICES:

Boreholes, SPT testing, laboratory soil & rock testing, SBC evaluation.

PROJECT DESCRIPTION:

Soil investigation for academic, hostel, and institutional buildings under CPWD norms.

KEY HIGHLIGHTS:

- 21 boreholes
- NABL lab testing
- CPWD 2019 compliance
- 15-day execution timeline

PROJECTS EXECUTED

10. RETROFITTING OF EXISTING INSTITUTIONAL BUILDING - MADURAI

Title : Structural Assessment & Retrofitting of Existing Building

Client : CRESCENT B.ED., WOMEN'S COLLEGE

Location : Madurai, Tamil Nadu

SCOPE OF SERVICES:

Detailed structural assessment, analytical evaluation, and retrofitting design of existing building including beams, columns, and foundations.

PROJECT DESCRIPTION:

Structural evaluation of an existing G+2 institutional building to identify critical deficiencies and implement suitable retrofitting measures to improve stability and performance.

KEY HIGHLIGHTS:

- Identified significant structural deficiency with beam deflection of approximately 160 mm
- Detailed analytical study carried out to assess performance of existing structural system
- Introduction of additional column to reduce span and control deflection
- Strengthening of existing beams, columns, and footings
- Introduction of shear walls to enhance lateral stability
- Improved overall structural safety and serviceability
